

THE DUGYTE 121 - RAPID PLUG-N-PLAY

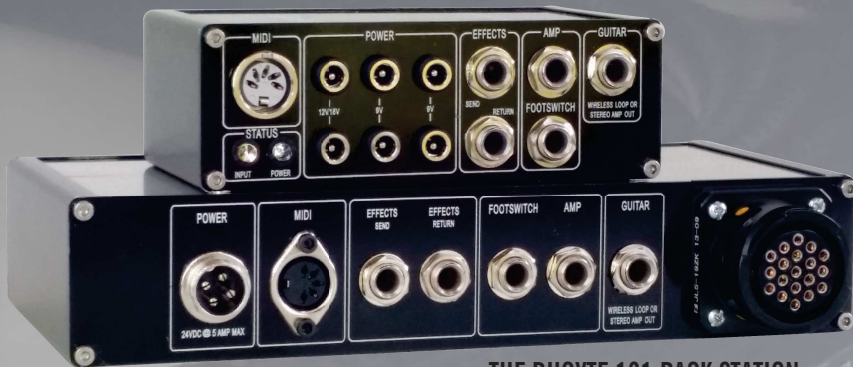

The DuGyTe GP121 Rapid Plug-n-Play design is a dual hub system that adds a "half rack" back station to the GP series front station.

Working as a two station system, it allows for pre set up of your backstage gear so at gig time, using the twin connector single All-In-One Cable, you can be set up in moments. This is the ultimate in speed, flexibility and performance along with the industries absolute fastest set up and tear down.

Hand made and crafted out of rugged aluminum the Front Station is the same size as most effects pedals. The Back Station is half-rack size and can be easily mounted.

With clean, noise-free signal quality and built-in regulated power, the DuGyTe is the only choice for fast simple and complete pedalboard signal and power connection.
